

NOTIFICATION OF SELECTION RESULTS

Request for final offer – DUCTS and DUCT EQUIPMENT

Notice to bidders

In response to RUNE RFFO call for the supply of ducts and duct equipment published on RUNE website and by email to potential bidders on 26 April 2019 we received eleven (11) offers.

The evaluation procedure comprised of three steps: administrative, technical and financial. All eleven (11) offers that were received by the requested deadline underwent the first - administrative stage of the procedure. After the administrative check 1 offer was considered incomplete and was eliminated from the technical and financial evaluation.

In the second step of the evaluation procedure the top five (5) bidders according to the offered prices were asked to send samples of microduct connectors and end plugs for the purpose of technical evaluation and testing. Technical evaluation and testing showed no significant discrepancies from the required minimum technical specifications as defined in the document Appendix 2 – Agreed minimum technical specifications, therefore the final decision was based on the financial parameters. To prevent potential technical issues related to compatibility of selected ducts and duct equipment we decided not to disperse the order per categories but to select the same supplier for ducts and duct equipment.

2 bidders were selected as preferred suppliers for ducts and duct equipment. All the selected bidders were already informed and we will be signing the Supply Agreements shortly.

The evaluation sheet of valid offers is an internal document which contains business secrets of the bidders and is not be publicly available.

We thank all the bidders for their effort and participation in the call.
